

Email Protection

Office 365 | Exchange | G-suite

SKOUT Email Protection is a new solution in the war against phishing. It is one of the smartest investments you can make for your organization.

SKOUT Email Protection is a cloud-based email security solution that blocks spam, and - most importantly - phishing attacks. Our solution catches everything by utilizing computer vision, artificial intelligence, and machine learning. Driven, curious, mobile, and growing smart by the subject line, SKOUT Email Protection adds an important layer of protection to your inbox.

PROTECT & TRAIN

Warning banners appear directly in the email, alerting the recipient to suspicious emails.

USER-FRIENDLY WARNINGS

Safe/Unusual/Malicious warnings let the recipient know the threat level of the email.

DEPLOY EFFORTLESSLY

Integrations into Office 365 organization-wide within minutes. Exchange and G-suite compatible.

EXPERT ANALYSIS

Alerts/threat feeds are sent to the Skouts in our Security Operations Center who are available 24/7/365.

THE NEXT GENERATION OF EMAIL PROTECTION

The challenges of phishing is daunting: we want the solution to be simple. From the classifier model that powers SKOUT's machine learning to the elegantly intuitive design of the banner, everything we do is designed to orient and empower our users.

- All incoming mail is automatically checked against over two dozen computer vision and text analysis models that "see" the message much like a person would - so even very convincing forgeries are blocked.
- Protects against both spear phishing and brand forgery attacks.
- Deploys organization-wide in 1-2 hours.
- Works with any mail client, on any device.
- "Report Phish" link in the mail sends to our security experts.
- HTML sanitization blocks XSS, Javascript, CSS attacks.
- Real-time analysis engine does not slow down mail delivery.
- Email is protected on desktop and mobile.
- Banners offer guidance.
