Endpoint Detection and Response:

A feature available with SolarWinds N-central

"Security breach" is one of the scariest terms an IT professional can hear. Resource-strapped IT teams must practice constant vigilance to stay ahead of cybercriminals.

SolarWinds® Endpoint Detection and Response (EDR) helps you prevent, detect, and respond to ever-changing threats—and recover quickly when ransomware or other exploits strike. Remediation and rollback can reverse the effects of an attack and restore endpoints to their pre-attack healthy state, helping minimize downtime.
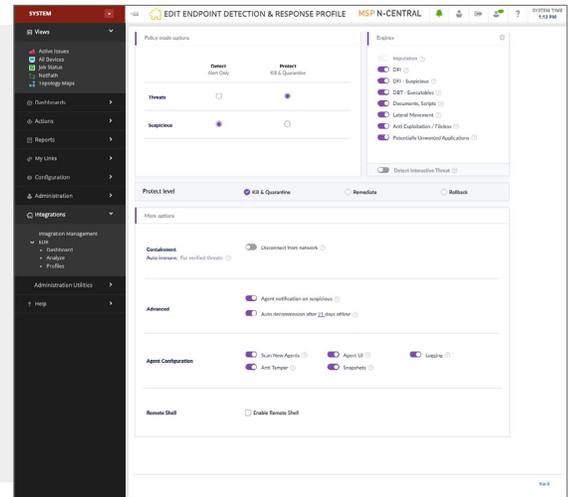

HELP PREVENT CYBERATTACKS

» Protect against the latest threats without waiting for recurring scans or updates to definition signatures.

» Respond to endpoint threats in near real-time.

» Enforce policy-driven protection tailored to your infrastructure: Allow/block USB and endpoint traffic to determine an appropriate response.

RESPOND EFFECTIVELY THROUGH AUTOMATION

» Automate responses for fast threat containment.

» Remediate attacks by reversing the effects.

DETECT THREATS WITH BEHAVIORAL AI

» Easily determine how and when an attack started.

» View summaries or detailed threat information from a single dashboard.

» Present key risk findings and executive insights via customized reports.

» Roll back attacks by replacing compromised files with pre-attack healthy versions.

EASILY ROLL OUT AND CONFIGURE

» Operate from a single dashboard, as EDR is integrated into N-central®.

» Deploy the EDR agent to both Windows® and macOS® devices.

» Use rules to automate EDR deployment.

» Leverage PSA workflows to address EDR alerts.

» Manage EDR licenses through the License Usage report.
